

Claude AI Learning Roadmap for AWS + DevOps Career Growth

This roadmap is designed for someone with your background:

- AWS Infrastructure experience
- Terraform knowledge
- GitHub and CI/CD exposure
- Limited coding background

Goal: Learn Claude AI in a practical way for cloud, DevOps, automation, troubleshooting, documentation, and career growth.

Phase 1: Understand Claude AI Basics (Week 1)

Goal of Week 1

Understand what Claude AI is, how it works, where it is useful, and how to use it comfortably.

You are not learning coding in this phase. You are only learning how to use Claude AI like a beginner.

Day 1: What Is Claude AI?

Learn

- Claude AI is an AI assistant created by Anthropic.
- It works similar to ChatGPT.
- It can answer questions, explain concepts, generate ideas, summarize text, and help with technical topics.

Understand Claude AI Uses

Claude can help with:

- Learning AWS concepts
- Explaining Terraform
- Writing documentation
- Troubleshooting errors
- Learning DevOps
- Improving productivity

Beginner Practice

Ask Claude:

- "What is Claude AI?"
 - "How is Claude AI useful for AWS engineers?"
 - "What can Claude AI do for beginners?"
-

Day 2: Create Claude AI Account and Explore Interface

Learn

Understand the Claude AI screen and navigation.

Explore These Areas

- Chat window
- New conversation button
- File upload option
- Prompt input area
- Response generation
- Continue conversation option

Practice

Open Claude AI and try:

- Start a new chat
- Ask one simple question
- Continue same conversation
- Open a new topic

Beginner Exercise

Ask:

- "Explain cloud computing in simple language"
 - "Explain AWS in beginner level"
-

Day 3: Learn How Claude Understands Questions

Goal

Understand how AI responds based on your prompt.

Learn

Claude gives better answers when:

- Question is clear
- Question is detailed
- Context is provided

Compare Prompt Types

Weak Prompt

"Explain EC2"

Better Prompt

"Explain AWS EC2 in simple language with real-world example"

Practice

Ask the same topic in 3 different ways.

Example:

- "Explain AWS VPC"
- "Explain AWS VPC for beginners"
- "Explain AWS VPC with real-world example"

Notice the difference.

Day 4: Learn Claude AI Strengths

Learn What Claude Is Good At

Claude performs well in:

- Long explanations

- Technical understanding
- Reading large text
- DevOps learning
- Architecture explanation
- Documentation creation
- Code explanation

Practice

Ask Claude:

- "Explain Terraform in simple language"
- "Explain CI/CD pipeline"
- "Explain Kubernetes architecture"

Goal

Understand how Claude explains technical topics.

Day 5: Learn Claude AI Limitations

Important Understanding

Claude is helpful but not always correct.

Learn These Limitations

- Can sometimes give wrong information
- May provide outdated answers
- Needs clear prompts
- Cannot replace real practice

Beginner Rule

Always verify:

- AWS documentation
- Terraform documentation
- GitHub documentation

Practice

Ask Claude technical questions and compare with official docs.

Day 6: Learn File Upload and Analysis

Goal

Understand how Claude reads uploaded content.

Learn

You can upload:

- Logs
- Terraform code
- Error messages
- YAML files
- Documentation

Practice

Upload:

- Small Terraform file
- Small log file
- AWS architecture screenshot

Ask:

- "Explain this file"
 - "Find problem in this file"
 - "Summarize this document"
-

Day 7: Practice Day

Goal

Use Claude naturally.

Practice Session

Spend 30–45 minutes asking Claude different questions.

Beginner Topics

- AWS basics

- Terraform basics
- GitHub basics
- DevOps basics
- Linux basics

Daily Exercise

Ask at least 10 questions.

Examples:

- "What is VPC?"
 - "What is subnet?"
 - "What is Terraform?"
 - "What is CI/CD?"
 - "What is GitHub Actions?"
-

Week 1 Success Outcome

After completing Week 1, you should be able to:

- Understand what Claude AI is
 - Use Claude comfortably
 - Ask proper beginner questions
 - Understand AI responses
 - Explore Claude interface confidently
 - Use Claude for AWS learning
 - Use Claude for DevOps learning
-
